

Report

Our team was able to complete all features as requested in the assignment description.

Both team members had an equal input and effort into the development of this project, 50%/50%.

Team Member 1: Kourosh Jaber

Worked on creating and designing the databases, and respective python code.

Created student page

Created a page where students could view their marks, as well as submit a remark request.

Ensured that the remark request was stored in the database.

Created a page where students could submit anonymous feedback, storing their answers in the database

Combined the new student components, such as view marks and anonymous feedback, to Assignment 2 website.

Displayed the name of the student user when they sign in Created login page

Helped in debugging Team Member 2's python and html code.

Team Member 2: Ali Zaheer

Worked on creating and designing the databases, and respective python code.

Did the instructor side features

Created landing page ("/")

Created **signup** page for instructor and student

Created Python code to add new users and manage errors

Created **login** page for instructor

Created python code to login and start an instructor session

Created instructor dashboard and shows instructor name when logged in.

Created **view class mark** page, and created python code to get class marks from database

Created **feedback** page, and created python code to get feedback from database

Created **mark update** page, and created python code to be able to update a student's mark in the database.

Created **view mark page**, and created python code to be able to view user marks from database.

Created 3 pages, that allow instructor to view **lectures, labs and assignments** without giving them full access to other website features, such as submit anon-feedback

Created python code that manages logout for both instructor session and student session.

Created multiple **error** pages, for example if username already exists when signing up
